

OS X VPN

Go to System Preferences
Click on **Network**

Select: +

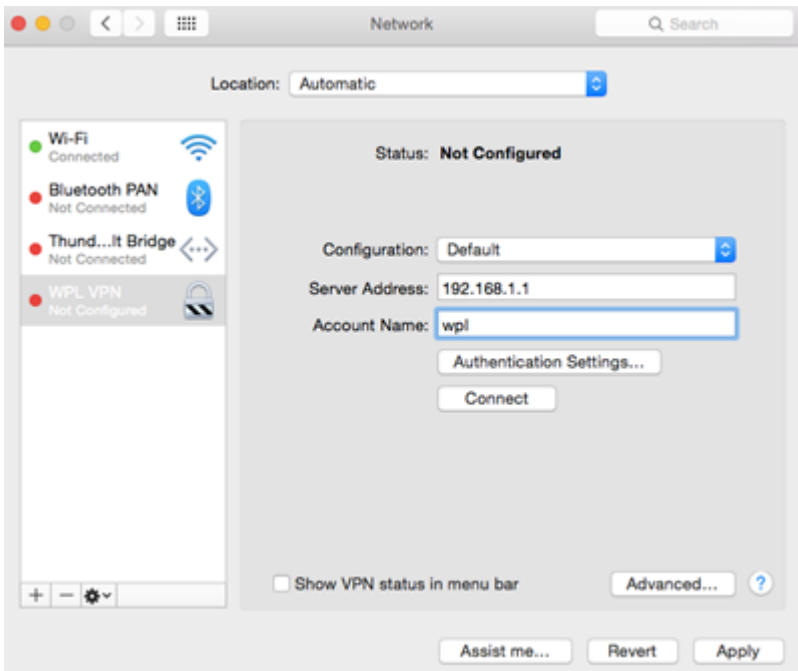

On the popup menu, select the following options:

Interface: **VPN**

VPN Type: **L2TP over IPSec**

Service Name: **WPL VPN** (or something you can identify)

Select: **Create**

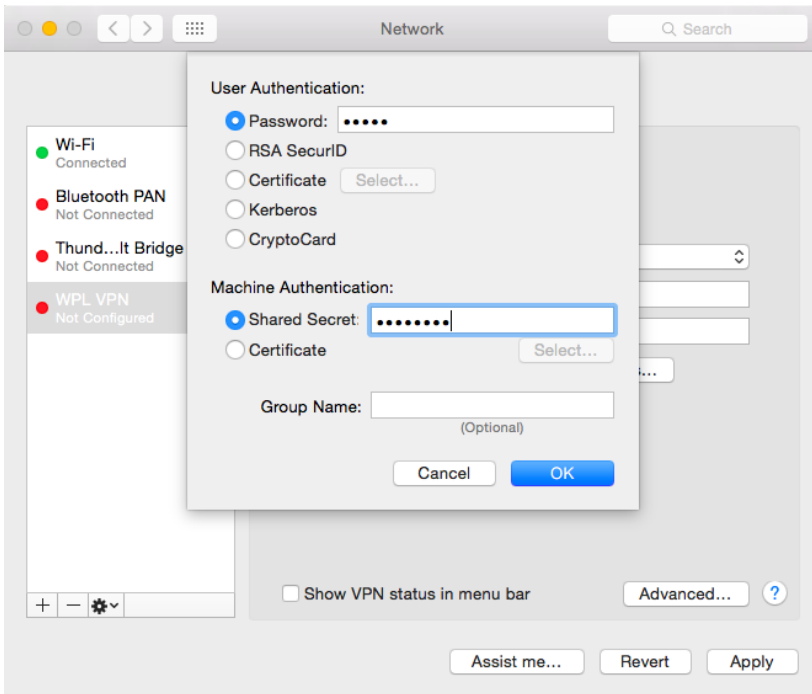

In the configuration menu, enter the following:

Server Address: **192.168.1.1**

Account Name: **wpl**

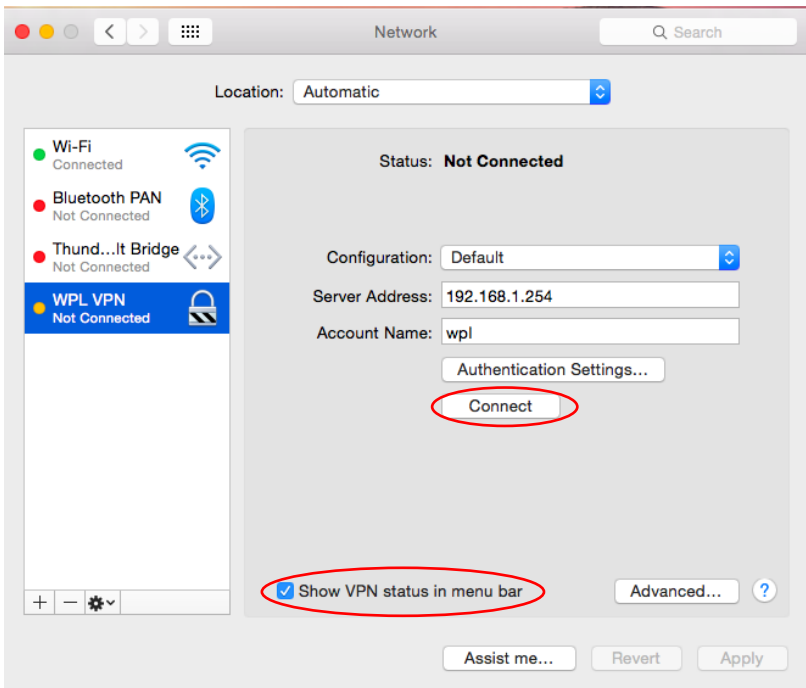

Click **Authentication Settings**

Password: **books**

Shared Secret: **wplctvpn**

Click **OK**

Click **Connect**

Note: Select **Show VPN status in menu bar** to use the VPN status icon to connect and disconnect to the network and switch between VPN services.

To remove the VPN configuration, select the VPN network connection service in the list and click -
